Every client project becomes a product

My work is both my marketing and my inventory. Real projects prove the quality, and the reusable parts become products you can buy.

1

Build for clients

Real apps for real users, shipped to the stores.

2

Package as products

The reusable parts become kits and templates.

3

Sell them again

Each product reaches new developers and builds the brand.

Need something custom? I'll build it for you

Custom app development

Cross-platform iOS and Android apps with clean architecture and store-ready releases.

MVP in weeks

Validate your idea fast with a focused first version, Firebase backend and analytics.

Audits & app rescue

Slow or buggy app? I fix performance and set a clear path forward.

From idea to launch in four steps

1

Discover

A short call to define your goals, users and scope.

2

Design

Clean screens and a clickable flow you can approve early.

3

Build

Weekly Flutter builds you can test on your own phone.

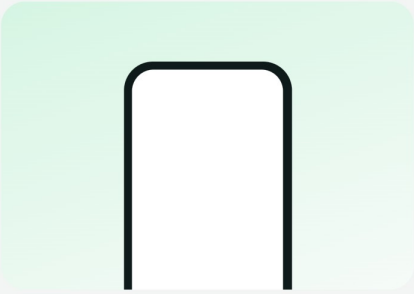

4

Launch

Store submission, monitoring and support after release.

Check my recent app projects

Services built around your app's goals

From first idea to a polished release, I handle the Flutter work so you can focus on your users and business.

Custom Flutter app development

A complete iOS and Android app from one codebase, designed to feel native and built to scale.

What you get

✓ Clean, tested architecture
✓ Store submission and release
✓ Source code and documentation

MVP for startups

Test your idea with real users fast. A focused first version without rebuilding later.

What you get

✓ Scoped feature list
✓ Firebase or Supabase backend
✓ Analytics from day one

Audits and app rescue

Inherited a slow or buggy Flutter app? I find the causes and fix them.

What you get

✓ Code and performance review
✓ Prioritized fix plan
✓ Hands-on fixes or team handover

How we work together

01
Discover
A short call to define goals, users and scope.

02
Design & build
Weekly builds you can tap through on your phone.

03
Launch
Store submission, monitoring and handover.

04
Support
Updates and improvements as you grow.

Simple, clear pricing

MVP

From $2,500

For validating an idea.

✓ Core features only
✓ Firebase backend
✓ Store submission

Full product

From $8,000

For a launch-ready app.

✓ Complete feature set
✓ Custom UI design
✓ Analytics and admin setup

Monthly retainer

$1,200 / month

Ongoing updates and support.

✓ Flexible monthly hours
✓ Bug fixes and updates
✓ Priority support

Have an app idea? Let's build it.

Apps I've designed and shipped

A selection of Flutter projects across industries. Each one started with a problem and ended in the stores.

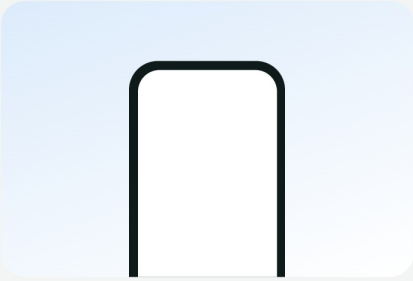

All | Fintech | E-commerce | Health | Other

Fintech · Flutter · Firebase

PayWise

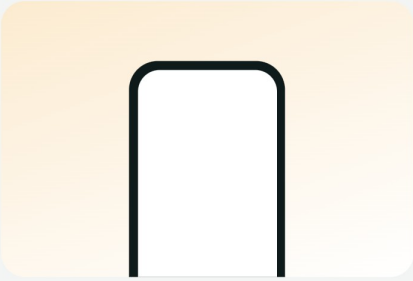

A mobile wallet for sending money, paying bills and tracking spending, with biometric login and instant notifications.

E-commerce · Flutter · REST API

FreshCart

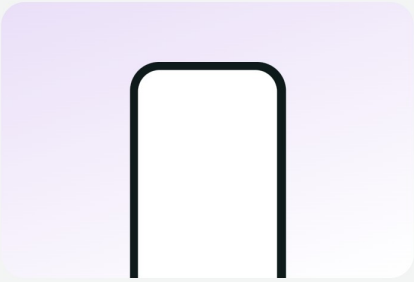

A grocery delivery app with live order tracking, saved baskets and smooth checkout for busy households.

Health · Flutter · Supabase

CareLink

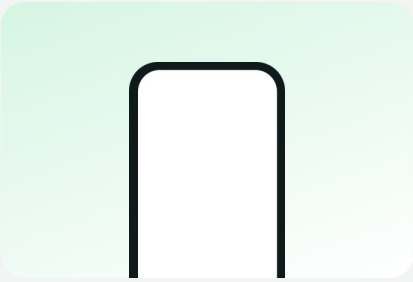

A telehealth app for booking appointments, video consultations and keeping health records in one place.

Fitness · Flutter · Bloc

FitPulse

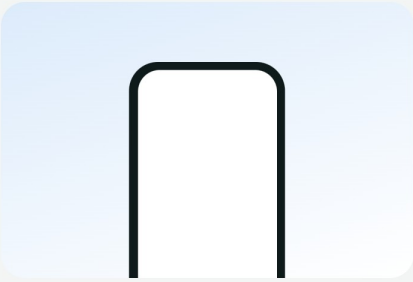

A fitness app with workout plans, progress tracking and reminders that keep users on track.

Travel · Flutter · Riverpod

TripNest

A travel planner that organizes bookings, itineraries and maps, even when offline.

Education · Flutter · GraphQL

LearnLoop

A learning app with short video lessons, quizzes and streaks that build daily study habits.

Don't take my word for it

"Muhammad delivered our app on time and the quality was outstanding. Our users love how fast and smooth it feels." Sarah Johnson, Founder, PayWise

PayWise: a mobile wallet people trust with their money

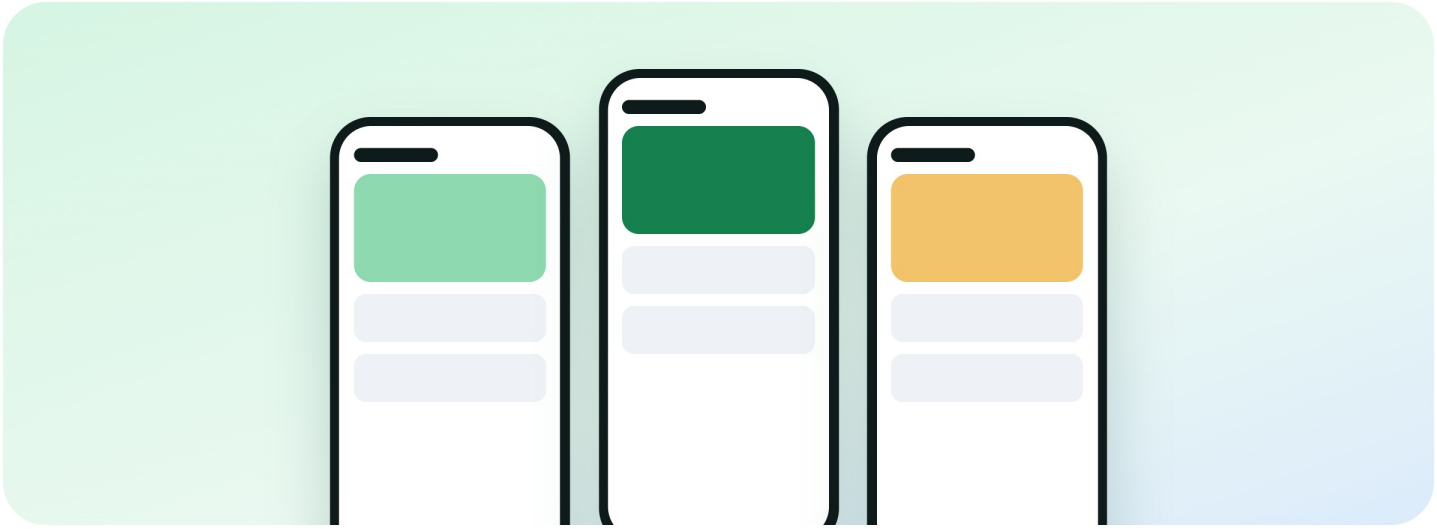

A Flutter wallet app for everyday payments, built for iOS and Android with a focus on speed and security.

Client
PayWise

My role
Lead Flutter developer

Timeline
12 weeks

Stack
Flutter · Firebase

The challenge

PayWise needed a fast, secure app that made everyday payments simple. Users expected instant feedback and complete trust, and the team could not afford separate iOS and Android codebases.

The solution

I built one Flutter codebase with a clean architecture and Firebase backend. Flutter gave the team native-feeling performance and a single release process, so new features reached both platforms at the same time.

Key features

Biometric login

Fingerprint and face unlock keep accounts secure without slowing users down.

Instant transfers

Real-time updates and push notifications confirm every payment as it happens.

Spending insights

Clear charts show where money goes each month, so users stay in control.

Results

50k
Downloads in 6 months

4.8★
Average store rating

40%
Faster checkout than the old app

"Working with Muhammad was easy from day one. He explained every decision, shipped weekly builds and launched both apps without any surprises."

Sarah Johnson, Founder, PayWise

Riverpod vs Bloc: which should you pick for your next Flutter app?

How the two most popular state management options differ, and a simple way to choose between them.

Muhammad Afnan
Nov 5, 2026 · 8 min read

State management is one of the first decisions in a Flutter project, and one of the hardest to change later. Riverpod and Bloc are the two most popular choices. Here is how they differ and how to pick the right one.

How Riverpod works

Riverpod lets you declare providers that hold state and expose it to widgets. A widget watches a provider and rebuilds when its value changes. It needs little boilerplate, handles async data well and is easy to test.

```
final counterProvider = StateProvider<int>((ref) => 0);

class CounterButton extends ConsumerWidget {
  @override
  Widget build(BuildContext context, WidgetRef ref) {
    final count = ref.watch(counterProvider);
    return ElevatedButton(
      onPressed: () => ref.read(counterProvider.notifier).state++,
      child: Text('Tapped $count times'),
    );
  }
}
```

How Bloc works

Bloc separates events, state and business logic. The UI sends events, the bloc processes them and new states flow back to the widgets. It takes more code up front, but the strict structure keeps large teams consistent and makes every state change easy to trace.

Key takeaway

Choose Riverpod for speed and flexibility on small to mid-size apps, and Bloc when you need strict structure across a large team.

Conclusion

Both are solid, production-ready choices. Pick the one your team will use consistently and keep the architecture clean. If you are unsure which fits your project, I am happy to help you decide.

Questions I hear often

How long does an app take?

Most MVPs take 6 to 10 weeks. A full app usually takes 3 to 6 months, depending on scope.

How do you price projects?

Fixed price per milestone for a defined scope, or a monthly retainer for ongoing work.

Do you publish the app to the stores?

Yes. I handle App Store and Google Play submission, including listing assets and review feedback.

Do you offer support after launch?

Yes. Monthly support plans cover updates, bug fixes and new features.

Have an app idea? Let's build it.

Built by one developer, shared with many

BuiltByAfnan is an independent software brand that turns real client work into reusable Flutter products.

Hi, I'm Muhammad Afnan

I'm a Flutter developer. After years of building apps for clients, I noticed the best code was being written once and never used again.

BuiltByAfnan changes that. Every project I ship feeds a library of reusable products, so my work keeps helping other developers and founders long after launch.

Browse products Hire me

Products and growing

What the brand stands for

Real-world tested
Every product comes from code that already shipped to real users.

Built to be reused
Clean structure and documentation, so you can adapt it fast.

Fair and simple
Clear licenses, honest pricing and no surprises.

Where BuiltByAfnan is going

NOW
Client apps and first kits
Custom work funds and proves every product.

NEXT
A growing product library
More starter kits, UI kits and templates.

THEN
Community and bundles
Updates, bundles and a place for buyers to share ideas.

VISION
A recognizable software brand
An independent name developers trust for Flutter.

Have an app idea? Let's build it.

Simple, fair licensing

Clear terms for developers, freelancers and agencies, so you always know what you can build.

Standard license

$79 / product

For one end product, either your own or a single client's.

You can

✓ Use in one commercial or personal app

✓ Modify the code freely

✓ Receive updates for 12 months

You cannot

✕ Resell or redistribute the source code

✕ Use in more than one end product

Extended license

$199 / product

For agencies and studios building many apps.

You can

✓ Use in unlimited end products

✓ Modify the code freely

✓ Receive updates for 12 months

You cannot

✕ Resell or redistribute the source code

✕ Publish the kit as a competing product

Refund policy

Digital products can be refunded within 14 days if the code does not work as described and I cannot fix the issue. Contact me with your order number.

Questions about licensing

Can I use a product in a client project?

Yes. A Standard license covers one end product, including one client project.

Do I need to credit BuiltByAfnan?

No credit is required, but it is always appreciated.

What happens after 12 months?

You keep using the version you downloaded. Renewing gives you newer releases.

Sample text. Have your final terms reviewed by a legal professional before launch.

Have an app idea? Let's build it.
